STRIDE ISP 3.1 – ID.AM

Asset Management Standards

Version [2.0]

Purpose:

This document defines the Stride standards related to Asset Management.

Scope and Applicability

These policies and standards apply to all Stride-owned technology and business operations.

All workforce members and their respective facilities supporting Stride business operations, technology, or both, wherever Stride data is stored or processed, including any third party contracted by Stride to handle, process, transmit, store, or dispose of Stride data are subject to the requirements of this document.

All data, systems, activities, and assets owned, leased, controlled, or used by Stride, its agents, contractors, or other business partners on behalf of Stride are within the scope of the requirements of this document.

The requirements outlined in this document apply where technically feasible and commercially reasonable, as determined by executive management. Any exceptions to these standards must be requested using the approved workflow and remain documented until compliance has been achieved. Exceptions are only granted temporarily for periods of up to one calendar year.

Definitions

All definitions are located within Stride - ISP 1.2 – IT Policy Definitions.

Any inquiries regarding terminology or clarity may be directed to Stride's Information Security Team for assistance.

Publication Owners

Johnny Burns – Point of Contact, Content Coordinator & Author

Jen Havenner – Business Owner

Mark Williams – Executive Sponsor

Document Control

This document may contain proprietary, confidential, or sensitive information owned wholly by Stride Inc. Any distribution of the information contained within this document, in whole or in part, outside of Stride or its subsidiary entities requires the approval of the Executive Sponsor.

This document will be reviewed at least annually and re-issued when revisions are necessary. Any changes introduced in the most recent version are itemized below. Obsolete copies should be destroyed or archived upon the release of the newest version.

Implementation and Compliance

All business units are required to comply with any changes applied to the most recent version of this publication within 90 days from the date of publication.

Change History

Version	Date of Change	Summary of Change(s)
1.0	6/15/2022	Initial Release and Publication
1.1	12/01/2022	- Added Change History - Updated and/or redacted language for clarity where necessary
1.2	03/17/2023	- Updated approvals section
1.3	01/01/2024	- Updated Purpose/Scope/Document Control/Implementation and Compliance - Changed formatting to new standard - Changed document images
2.0	02/06/2025	- Updated Policy Title - Updated Policy to match NIST 2.0 Release Changes - Updated Publication Owners
2.0	02/24/2025	- Approved Mark Williams - CISO
2.0	02/27/2025	- Published

ASSET MANAGEMENT STANDARDS

Assets, including data, hardware, software, systems, facilities, services, and personnel, that support Stride in achieving business purposes are identified and managed in alignment with their relative significance to Stride's objectives and risk strategy.

ID.AM-01 HARDWARE INVENTORY

Stride maintains accurate and detailed inventories of hardware managed by Stride.

Standards:

- An accurate, detailed, and up-to-date inventory is maintained of all enterprise assets with the potential to store or process data, including end-user devices (including portable and mobile), network devices, non-computing/IoT devices, and servers.
    - A pre-defined shared location or repository is easily accessible, secured, and available to authorized personnel.
    - Asset inventory must include relevant information such as serial number, model number, version, device name, asset tag number, and Enterprise Asset Owner and Department, as technical limitations allow.
    - Review and update the inventory of all enterprise assets bi-annually or more frequently.
- Stride maintains a current and complete asset inventory of physical devices, hardware, and information systems.

- SP 800-221A: MA.RI-1
- CSF v 2.0: ID.AM-1

ID.AM-02 SOFTWARE ASSET MANAGEMENT

Stride maintains inventories of software, services, and systems managed by Stride.

Standards:

- A detailed inventory is maintained of all software installed on enterprise assets.
    - A pre-defined shared location or repository is easily accessible, secured, and available to authorized personnel.
    - The software inventory contains, at a minimum and where applicable, the following:
        - Title
        - Publisher and contact information, including publisher's website, contact numbers, and email
        - Implementation date and deployment mechanism, i.e., Intune or ConnectWise
        - Software type (multiple categories may be included):
            - Licensed
            - Unlicensed
            - Free and Open Source (FOSS)
            - Artificial Intelligence
        - Business purpose and description of the software
        - Version deployed and current known version
        - Last review date
        - Decommission date
        - Any known vulnerabilities or discovered vulnerabilities
        - Internal Contact or System Owner

    - The software inventory is reviewed and updated bi-annually, or more frequently.

- Stride maintains a current and complete inventory of software platforms, business applications, and other software assets (e.g., virtual machines and virtual network devices).

- CSF v 2.0: ID.AM-2

ID.AM-03 NETWORK COMMUNICATIONS AND DATA FLOWS

Stride maintains comprehensive records of authorized network communications and both internal and external data flows.

Standards:

- Data flows are documented.
    - A pre-defined shared location or repository for mapped communication and data flow is easily accessible, secured, and available to authorized personnel.
    - Data flow documentation includes service provider data flows and should be based on the enterprise's data management processes.
    - Documentation is reviewed and updated annually, or when significant enterprise changes occur that could impact this safeguard.
- Stride has established operational baselines, including network and cloud infrastructure baselining to determine the usual ebb and flow of data and communications within the organization.

- A baseline of network and cloud infrastructure operations and expected data flows for users and systems is established and managed through the following activities:
    - Data flows are mapped and maintained.
    - Network/Cloud diagrams and application service maps are mapped and maintained.
    - Protocols are inventoried and maintained.
    - Systems, software, databases, and identities are inventoried and maintained.
    - Any unauthorized use of the information systems is identified.
    - Monitoring devices are deployed within the information systems.
    - Information obtained from intrusion-monitoring tools is protected from unauthorized access, modification, and deletion.
    - The level of information system monitoring activity is heightened whenever there is an indication of increased risk to organizational operations and assets, individuals, other organizations, or the nation based on law enforcement information, intelligence information, or other credible sources of information.

- Stride maintains current maps of network resources, mobile resources, external connections, network-connected third parties, and network data flows.

- CSF v 2.0: DE.AE-1

ID.AM-04 SUPPLIER SERVICES INVENTORY

Stride maintains inventories of services provided by suppliers.

Standards:

- Architecture diagram(s) and other external system documentation are maintained.
    - Documentation clearly defines external information systems, and a shared repository is established for authorized personnel.
    - Documentation is reviewed and updated annually, or when significant enterprise changes occur that could impact this safeguard

Hardware, software, and data assets maintained by or located at suppliers or other third parties are included in Stride's asset management inventories and lifecycle management processes to ensure effective management and security.

ID.AM-05 ASSET PROTECTION PRIORITIZATION

Assets are prioritized based on classification, criticality, resources, and impact on the mission.

Standards:

- Data inventory is maintained based on the enterprise's data management process.
    - A pre-defined shared location or repository is easily accessible, secured, and available to authorized personnel.

- Inventory is reviewed and updated annually, at a minimum, with a priority on sensitive data.

- Stride establishes and maintains risk-based policies and procedures for the classification of hardware, software, and data assets based on sensitivity and criticality.

- Stride's hardware, software, and data assets are prioritized for protection based on their sensitivity, criticality, vulnerability, business value, and dependency role in the delivery of critical services.

- A data classification scheme for the enterprise is maintained and updated per business needs.

  - Data is classified under the following categories, following the STRIDE Data Classification Standard, when meeting established criteria:

Category	Description
PUBLIC	Data which may be freely disclosed to the public. This data is intended for public use or disclosure.
INTERNAL	Information may only be shared within the company.
CONFIDENTIAL	Confidential and sensitive information intended only for those with a "business need to know."
RESTRICTED	High-risk information that requires strict controls.
HIGHLY PROTECTED	Extremely sensitive information that requires strict controls and isolation from the network.

  - The classification scheme is reviewed and updated annually or when significant enterprise changes occur that could impact this safeguard.

- CSF v 2.0: ID.AM-5

ID.AM-07 DATA AND METADATA INVENTORY

Stride maintains inventories of data and corresponding metadata for designated data types.

Standards:

- Stride maintains a current inventory of the data being created, stored, or processed by its information assets, along with data flow diagrams depicting key internal and external data flows.

References:

- CIS Controls v8.0: 3.2
- CRI Profile v2.0: ID.AM-07
- CRI Profile v2.0: ID.AM-07.01
- SP 800-221A: MA.RI-1

ID.AM-08 ASSET LIFE CYCLE MANAGEMENT

Systems, hardware, software, services, and data are managed throughout their life cycles.

Standards:

- Stride establishes and maintains asset lifecycle management policies and procedures to ensure that assets are acquired, tracked, implemented, used, decommissioned, and protected commensurate with their sensitivity, criticality, and business value.
- Stride establishes policies, and employs methods to identify, assess, and manage technology solutions that are acquired, managed, or used outside of established, governed technology and cybersecurity processes (i.e., "Shadow IT").
- Stride establishes policies, standards, and procedures for data governance, data management, and data retention consistent with its legal obligations and the value of data as an organizational asset.

- Stride's asset management processes ensure the protection of sensitive data throughout removal, transfers, maintenance, end-of-life, and secure disposal or re-use.

- Stride defines and implements standards and procedures, consistent with its data retention policy, for destroying or securely erasing data, media, and storage devices when the data is no longer needed.

- Minimum cybersecurity requirements for third parties cover the entire relationship lifecycle, from the acquisition of data through the return or destruction of data, to include limitations on data use, access, storage, and geographic location.

- Assets are formally managed in accordance with Stride's Asset Management processes and procedures.

- Information and records (data) are managed consistently with the Stride risk strategy to protect the confidentiality, integrity, and availability of information.

- A System Development Life Cycle to manage systems is implemented.

- Maintenance and repair of organizational assets are performed and logged promptly with approved and controlled tools.

- Remote maintenance of organizational assets is approved, logged, and performed to prevent unauthorized access.

- Data is destroyed or sanitized in accordance with organizational policies and procedures.

    - Stride ensures the destruction or sanitization of data and media complies with the Stride Data Retention Policy, reflecting guidelines from NIST Special Publication (SP) 800-88 Rev.1, which outlines best practice for media sanitization.

    - Sanitizing mechanisms are selected based on the security classification of the data. Higher-classified or sensitive information requires more rigorous sanitization methods, such as degaussing or physical destruction, as recommended by NIST SP 800-88.

    - The sanitization process is reviewed, approved, tracked, documented, and independently verified to ensure compliance with policy and security standards.

- All documentation regarding sanitization activities is centrally stored in a secure repository, with access strictly limited to authorized personnel. This aligns with organizational access control policies and supports audit and accountability measures.
