STRIDE ISP 5.2 – DE.AE

Adverse Event Analysis Standards

Version [2.0]

Purpose:

This document defines the Stride standards related to Anomalies and Events.

Scope and Applicability

These policies and standards apply to all Stride-owned technology and business operations.

All workforce members and their respective facilities supporting Stride business operations, technology, or both, wherever Stride data is stored or processed, including any third party contracted by Stride to handle, process, transmit, store, or dispose of Stride data are subject to the requirements of this document.

All data, systems, activities, and assets owned, leased, controlled, or used by Stride, its agents, contractors, or other business partners on behalf of Stride are within the scope of the requirements of this document.

The requirements outlined in this document apply where technically feasible and commercially reasonable, as determined by executive management. Any exceptions to these standards must be requested using the approved workflow and remain documented until compliance has been achieved. Exceptions are only granted temporarily for periods of up to one calendar year.

Definitions

All definitions are located within Stride - ISP 1.2 – IT Policy Definitions.

Any inquiries regarding terminology or clarity may be directed to Stride's Information Security Team for assistance.

Publication Owners

Johnny Burns – Point of Contact, Content Coordinator & Author

Jen Havenner – Business Owner

Mark Williams – Executive Sponsor

Document Control

This document may contain proprietary, confidential, or sensitive information owned wholly by Stride Inc. Any distribution of the information contained within this document, in whole or in part, outside of Stride or its subsidiary entities requires the approval of the Executive Sponsor.

This document will be reviewed at least annually and re-issued when revisions are necessary. Any changes introduced in the most recent version are itemized below. Obsolete copies should be destroyed or archived upon the release of the newest version.

Implementation and Compliance

All business units are required to comply with any changes applied to the most recent version of this publication within 90 days from the date of publication.

Change History

Version	Date of Change	Summary of Change(s)
1.0	6/15/2022	Initial Release and Publication
1.1	12/01/2022	- Added Change History - Updated and/or redacted language for clarity where necessary
1.2	03/17/2023	- Updated approvals section
1.3	01/01/2024	- Updated Purpose/Scope/Document Control/Implementation and Compliance - Changed formatting to new standard - Changed document images
2.0	02/17/2025	- Changed Title - Updated Policy to match NIST 2.0 Release Changes - Updated Publication Owners
2.0	03/08/2025	- Published

ANOMALIES AND EVENTS STANDARDS

Policy on Anomalies and Events:

Anomalous activity is detected, and the potential impact of events is understood.

DE.AE-02: EVENT ANALYSIS

Detected events are analyzed to understand attack targets and methods.

Standards:

- Stride analyzes all events that show indicators of compromise (IOCs) or attack indicators to understand potential targets and methods used. Detection may be accomplished through automated or manual processes. Review of IOCs occurs, at minimum, weekly.

- Stride collects security event logs, including but not limited to logical authentication, server or application security events, threats, vulnerabilities, risky behaviors, or other sources as defined by the Chief Information Security Officer of Information Security.

    - Security event logs are retained in accordance with Stride Data Retention Policy or as necessary to support legal, regulatory, and/or contractual requirements.

    - Security event logs may not be accessed, shared, modified, deleted, or altered without the approval of the Vice President, Information Security.

- For the purpose of detection and analysis, Stride may carry out the following activities:

    - Profiling of networks, cloud infrastructure, applications, and systems to understand the expected activity, allowing personnel to identify changes in typical behavior.

    - Understanding normal behavior to allow recognition of the abnormal activity of personnel.

    - Utilize log retention to correlate behaviors to logged events and activities.

    - Perform event correlation to validate event occurrence.

- CSF v1.1: DE.AE-2

DE.AE-03: DATA CORRELATION AND AGGREGATION

Event data are aggregated and correlated from multiple sources and sensors

Standards:

- Stride correlates events among multiple indicator sources to assist in validating and investigating events using a Security Incident Event Management (SIEM) tool.
- Stride disseminates information regarding ongoing events through established communication channels with leadership and/or stakeholders, in accordance with a formalized communication plan.
- Communication channels may include internal messaging, email, phone, and word of mouth to authorized personnel with a need-to-know requirement.
- Communication channels are documented, and personnel are informed on use of communication channels as appropriate.
    - Events will be documented and monitored as the investigation progresses.
    - Status will be given at regular intervals by a designated reporting official.
    - When the event and investigation conclude, leadership and/or stakeholders are notified accordingly.

DE.AE-04: IMPACT DETERMINATION

The impact of events is determined.

Standards:

- Stride determines the impact of events and classifies the event by determining the following:
    - Functional Impact of the Incident.
    - How the incident will impact the existing functionality of the affected systems.
    - Information Impact of the Incident.
    - How the incident may affect the confidentiality, integrity, and availability of the organization's information.
    - Recoverability from the Incident:
        - The size of the incident and the type of resources it affects will determine the amount of time and resources that must be spent on recovering from that incident.
        - The team will prioritize the response to each incident based on its estimate of the business impact in accordance with Stride's Security Incident Response processes.
    - Event classifications are in accordance with the Stride Crisis Management Guide.

DE.AE-06: AUTHORIZED DISSEMINATION OF ADVERSE EVENT INFORMATION

Information on adverse events is provided to authorized staff and tools.

Standards:

- Stride ensures that information on adverse events is provided to authorized staff and tools promptly and accurately.
    - A list of authorized personnel who should receive information on adverse events is maintained and regularly updated.
    - Relevant tools and systems used for disseminating information are identified and integrated into the incident response process.
- Established communication protocols ensure timely and effective dissemination of information on adverse events.
    - Clear procedures for notifying authorized personnel about adverse events are documented.
    - Different communication channels (e.g., email, messaging apps, incident response platforms) are defined based on the severity and urgency of the event.
- The content of the information provided includes all necessary details to facilitate an effective response.
    - A detailed description of the adverse event, including nature, scope, and potential impact.
    - Defined IOCs to help personnel identify and assess the event.
    - Recommended actions and steps for addressing the adverse event.
    - Regular updates on the status of the event and any changes in its impact or required response.
- Information on adverse events is verified and validated before dissemination to ensure accuracy.
    - Cross-checking information with multiple sources to confirm the validity of the event.
    - Ensuring that the event meets the criteria for an adverse event and requires action.

- Comprehensive documentation and logging of the information dissemination process ensure accountability and traceability.
    - Detailed logs of the adverse event, including the information provided, recipients, and time of dissemination.
    - Maintaining audit trails to track the information dissemination process and ensure compliance.

DE.AE-07: INTEGRATE CYBER THREAT INTELLIGENCE

Cyber threat intelligence and other contextual information are integrated into the analysis.

Standards:

- Stride integrates cyber threat intelligence into the analysis of adverse events to enhance the understanding and response to potential threats.
    - Identification and utilization of multiple CTI sources, including open-source intelligence, commercial threat intelligence services, and information sharing and analysis centers (ISACs).
    - Ensuring that the CTI is relevant to the organization's industry, operations, and threat landscape.
- Stride incorporates contextual information into the analysis to provide a comprehensive understanding of adverse events.
    - Integration of internal data such as network architecture, asset inventory, and historical incident data.
    - Incorporation of external data such as industry trends, geopolitical events, and regulatory changes.

- The integration of CTI and contextual information enhances the analysis process by providing a broader perspective on potential threats.
    - Correlating CTI with internal data to identify patterns and relationships between different events.
    - Enhancing risk assessments by considering the broader context of potential threats and their impact on the organization.
- Stride aggregates and correlates data from multiple sources to identify potential adverse events and enhance situational awareness.
    - Aggregating data from CTI feeds, security tools, and internal sources for comprehensive analysis.
    - Defining correlation rules to identify patterns and relationships between different data points.
- Stride utilizes automated tools and technologies to assist in the integration and analysis of CTI and contextual information.
    - Leveraging SIEM platforms to collect, aggregate, and analyze data from various sources.
    - Using TIPs to manage and analyze CTI feeds.
- Stride regularly updates and maintains its CTI sources and contextual information to ensure they remain current and relevant.
    - Regularly updating CTI feeds to reflect the latest threat intelligence.
    - Periodically reviewing and updating contextual information to account for changes in the threat landscape and organizational priorities.

DE.AE-08: INCIDENT DECLARATION CRITERIA AND PROCESS

Incidents are declared when adverse events meet the defined incident criteria.

Standards:

- Stride has established clear criteria and a process for declaring incidents when adverse events meet the defined thresholds.
    - Specific criteria for declaring incidents are documented and communicated to relevant personnel. These criteria are based on factors such as the nature, severity, and potential impact of adverse events.
    - Thresholds are defined for different types of adverse events, indicating when an event escalates to an incident.
- Each adverse event is assessed to determine if it meets the criteria for being declared an incident.
    - Assessments consider the potential impact on operations, data integrity, confidentiality, and availability.
    - Severity levels are assigned based on the assessment, guiding the declaration decision.
- Stride assigns specific roles and responsibilities for making incident declaration decisions.
    - The IRT or designated authority is responsible for assessing adverse events and declaring incidents.
    - Decision-making authority is clearly documented to ensure timely and consistent declaration decisions.
- Comprehensive documentation and logging of the incident declaration process ensure accountability and traceability.
    - Detailed logs of adverse events, assessment results, and declaration decisions are maintained.
    - Audit trails are kept to track the decision-making process and ensure compliance.

- Timely communication and notification are essential during the incident declaration process.
    - Procedures for notifying relevant personnel and stakeholders about declared incidents are documented.
    - Different communication channels are utilized based on the severity and urgency of the incident (e.g., email, phone, messaging apps).
- Ensuring that the incident declaration process complies with relevant legal, regulatory, and contractual requirements.
    - Conducting declaration activities in accordance with data privacy regulations.
    - Generating reports to demonstrate compliance with declaration requirements.
